Mooltipass Device

1) Getting Started

Connect your Mooltipass to your computer using a micro USB cable. Once connected, a tutorial will be shown.

After following its instructions this screen is displayed.

To get started, you need to set up a new Mooltipass user.

Simply insert one of the cards you received in the Mooltipass.

The Mooltipass will prompt you to create a new user.

Press on the lower right blue light to accept the request. Pressing the lower left one denies the request.

Next you will setup your Personal Identification Number (PIN). Each of the four PIN characters can be one of the digits 0-9 or one of the letters A-F.

Move your finger in a circle **inside** the curved blue lights to set the first character of your PIN. Touch the right blue light to move to next PIN character.

When the 4th character is selected, press right to approve your new PIN code.

Use the interface to input the same PIN you previously entered.

If everything went well, the main menu will be displayed to you.

Congratulations, your Mooltipass and the smart card are set up and ready for use!

II) Password Storage and Recall

The Mooltipass works best with our app and extension on the Chrome browser. To install them visit <http://www.themooltipass.com/setup>

Visit any website login page; enter your login and password.

The Mooltipass will then ask you if you want to store the website, login and password.

Touch the lower right blue light to approve storing your user ID.

To keep the bad guys out, the Mooltipass always asks you for permission to use or change information you have stored in it.

Finally, approve the password modification.

From now on, every time you need to login to this website, the Mooltipass will ask your permission to enter your credentials for you.

III) Manual Login

Manual Login is generally used to enter credentials outside the Google Chrome browser.

In the main menu, press the top left quadrant.

Use the wheel interface to input the first letter of the website you want to log in to.

Press the left/right arrows to add /remove letters to your search string.

Finally, touch a quadrant to select the website.

If more than one credential set is stored for a given website, select the desired login by touching the corresponding LED quadrant.

The Mooltipass will then prompt you to accept your login entry.

If the typed data isn't correct, make sure your keyboard layout is correctly selected in the settings tab of the Mooltipass app.

The Mooltipass will finally prompt you to accept your password entry.

IV) Manual Login – Favorite Menu

In the main menu, press the bottom left quadrant to show your favorite credentials.

You may use the 'manage' tab of our app to tag credential sets as favorites.

Select the desired credential set by pressing the corresponding quadrant. If there are more than four favorites, you can scroll by using the left and right arrows view all the favorites four at a time.

As before, approve or deny the login/password entry requests.

V) Settings Menu

In the main menu, press the top right quadrant.

You will be presented with different options.

VI) Changing the Card PIN

In the settings menu, press the top right quadrant.

Enter your old PIN.

Enter your new PIN.

Confirm your new PIN.

VII) Cloning your Card

In the settings menu, press the bottom right quadrant.

Enter your PIN.

Enter the PIN for the new card

Confirm the new PIN.

Remove your card.

Insert a new smart card.

VIII) Deleting your User Data from the Mooltipass

In the settings menu, press the bottom left quadrant.

The Mooltipass will prompt you for confirmation.

Enter your PIN.

If you are really sure you want to delete your user data from the Mooltipass, confirm.

If you are using your current smart card on other Mooltipass devices, deny the request to erase the card.

Otherwise, accept it.

If you have other cards, approve the following request and repeat the previous process to erase those cards as well.

Mooltipass Chrome Extension

I) Extension Menu

Next to your address bar the Mooltipass icon should be displayed.

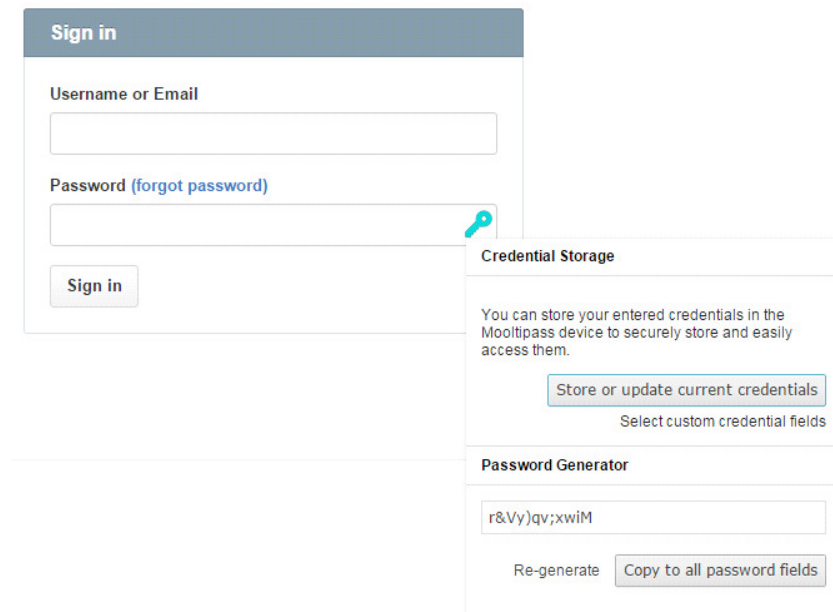

Clicking on it will bring its menu.

II) Device Status

The device status is displayed on the extension menu bottom right corner.

III) Password Generator and Credential Storage

By clicking on the green key icon inside a password field, you can bring up our password generator.

In the rare cases where the extension doesn't pick up a credential submit event, you may also use this menu to manually trigger a credential storage procedure.

IV) Selecting Custom Credential Fields

The Mooltipass extension should automatically detect all credential fields in the web pages you visit. As previously shown, it will then display a green key icon inside the detected password field.

In the rare case the credential fields aren't picked up, you may specify them by clicking this item in the extension menu.

Follow the on-screen instructions to select the username and password fields

V) Extension Settings

You may bring up the Mooltipass extension settings page by clicking on the dedicated item in the extension menu.

Among others, the settings page will allow you to visualize your blacklisted websites, and the ones for which you have stored custom credential fields.

VI) Reporting Incompatibilities

The Mooltipass team actively works to ensure the extension works with all the websites you may visit. If you find a website that is incompatible, we'd like to know about it.

To report an incompatibility, please click on the dedicated link in our extension menu.

Mooltipass Chrome Application

Note: the Mooltipass application is currently being developed and will be automatically updated

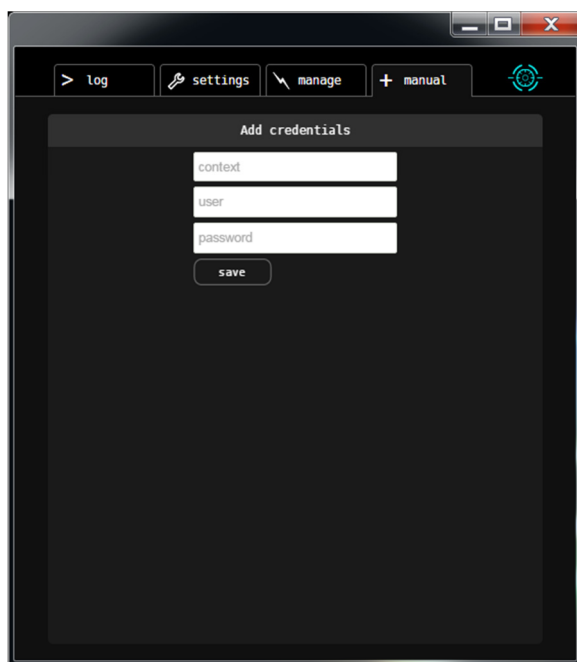

I) Log Tab

The Mooltipass application has several tabs.

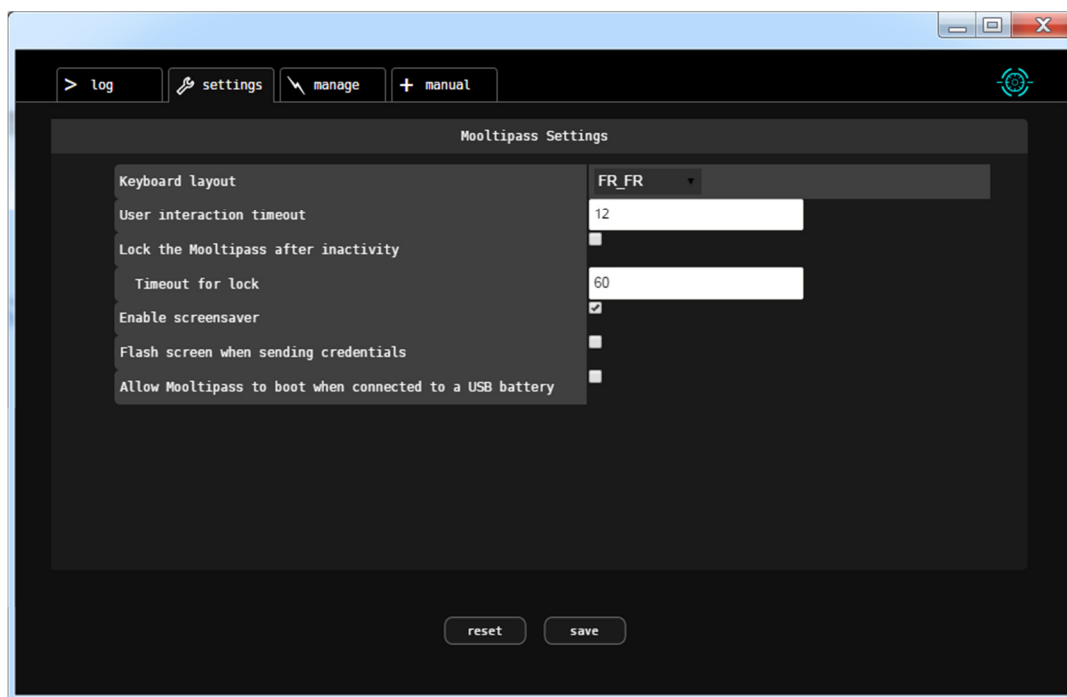

The default one called 'log' shows the different events that happened.

II) Manual Tab

This tab allows you to manually add credentials for a given service (website, server...)

III) Settings Tab

In the settings tab you can:

- Set the Mooltipass keyboard layout the Mooltipass emulates
- Specify the number of seconds after which a user request on the Mooltipass times out
- Enable/Disable an automatic Mooltipass lock after several minutes of inactivity
- Specify the number of minutes of inactivity after which the Mooltipass lock will happen
- Enable/Disable the Mooltipass screen saver
- Enable/Disable screen flashing when user action is required
- Allow/Prevent the Mooltipass from starting when connected to a USB battery

Simply adjust the settings and click the save button.

Mooltipass Conversion for Arduino uses

Using a sharp knife, slowly and carefully cut around the edges of the two slots on the bottom of the Mooltipass. The ABS plastic case is quite robust. Take your time and go slowly.

Take care not to push the blade through the case and into the internal printed circuit board as it could cause permanent damage.
